

Gas Purification Media

GETTERS CATALYSTS ADSORBERS

Applying the right media to a given application requires purification media expertise beyond just the basics. ARM employs experts in alloy gettering, catalytic, and adsorber technologies to ensure that the fill material in our purifiers will meet and exceed performance expectations.

ARM's media expertise includes 30+ years of experience in production and handling of the various getters and catalysts employed in gas purification, including being part of the team that developed the first NEG Zr alloy.

Much of the media employed in gas purification requires special handling. ARM's experience includes exotherm mitigation, and media recovery.
