Industrial Gas

Advanced Research Manufacturing (ARM, Inc.) was founded in 1998. We design, manufacture, install, and maintain gas delivery system solutions tailored to meet customer requirements.

ARM's products begin at the bulk gas pad and carry through to the point-of-use. ARM manufactures Ultra High Purity (UHP) vaporizer switching assemblies, pressure control manifolds, bulk filtration systems, hose docking stations, gas blenders, and PSA based gas separation systems.

Gases leaving the bulk source are purified using ARM's bulk purifiers incorporating the latest in controls and instrumentation technology. Our gas purification systems are designed and built to meet application specific requirements including gas pad installation, freeing valuable interior manufacturing space previously required for purification and filtration. ARM's bulk purifiers are built to withstand environmental extremes and have a proven record of reliability from frigid temperatures (-40°C and below), to the hottest deserts and most humid coastal environments, providing uninterrupted high purity gas supply.

ARM's product offerings move inside with our Point-of-Use purifiers including Nova and Pro-Panel Series. ARM's industry proven purifiers are available for atmospheric, hydride, acid, CO_2 , H_2 /Synthesis, and other specialty gases.
